The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Application/Control Number: 10/825,607

Art Unit: 1657

In view of the rewritten claims and applicants' arguments, the rejection under 35 USC § 112 second paragraph is hereby withdrawn. This office action made non-final due to a new rejection under 35 USC § 112 first paragraph.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-24, 33, 44 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for detecting the presence of contaminating mycoplasma in a mammalian cell culture, does not reasonably provide enablement for any test samples with bacteria and certain eukaryotic microbes growth (such as fungi, see Ingram-Smith et al. Trend5 in Microbiology 2006;14(6):249-253). The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims.

The specification as filed, is enabled for a method of detecting the presence of mycoplasma in a mammalian cell culture sample, but is not enabled for any test sample especially samples with bacteria and/or eukaryotic microbes (such as fungi) growth.

The art of biotechnology is a highly unpredictable art and it would be an undue burden for one of ordinary skill in the art

Art Unit: 1657

to test any and all kind of test sample to see if mycoplasma can be detected by measuring acetate/carbamate kinase. It is clear that the claimed detection method can only detect mycoplasma in mammalian cell culture, and can not detect mycoplasma in any test sample especially samples with bacteria and/or eukaryotic microbes growth, thus one of ordinary skill in the art would not know how to practice the detection method in just any test sample.

Page 3

Applicant has only stated in their example that bacteria have acetate kinase activity are not those that are commonly found as contaminants of cell culture, (see specification at page 26), and did not address how to separate test samples with eukaryotic microbe growth. It is clear that such broad claims are not enabled by the instant specification when one of ordinary skill in the art practice the detection method with any test samples.

Thus, the claims are unduly broad and do not find proper support from the instant specification. Thus, the rejection is properly made.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/825,607

Art Unit: 1657

Claims 1-34, 44-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Kahane et al. (FEMS Microbiology Letters 1978;3:143-145) in view of Ito et al. (Analytical Sciences 2003;19:105-109).

Kahane teaches a mycoplasma acetate kinase activity assay comprises detecting/measuring the appearance/disappearance of one or more of the substrates/products of the reactions as claimed in claim 3 after osmotically lysis (page 143, Materials and Methods and Results and Discussion, 1st and 2nd paragraph), and that acetate kinase is present in mycoplasma (page 143 end of 1st paragraph and page 145, lines 1-7).

Kahane does not teach the detection of mycoplasma in cell culture and the assay reaction is a bioluminescent reaction

Ito teaches a bioluminescent measurement of acetate kinase (Title and abstract).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to make use of Kahane's conclusion that mycoplasmas has acetate kinase activity to develop a detection method by measuring acetate kinase activity and combine Ito's bioluminescent method to simplify the detection method because both methods teach acetate kinase assays. One would have been motivated to make the modification because Kahane et al. specifically described the acetate kinase assay and that acetate kinase presents in mycoplasma and Ito et al. teach the advantages of the bioluminescent method, and would reasonably have expected success in view of Ito's teaching that no interference in the measurement of the acetate kinase and with good sensitivity when using their bioluminescent method (page 107, 1st full paragraph). The choice of detecting mycoplasma in cell culture using enzyme activity ratio of

Art Unit: 1657

testing sample over control sample, the adjustment of particular conventional working conditions (e.g., use of detergent, incubation time period for the reaction, choice of cell lines) is deemed merely a matter of judicious selection and routine optimization which is well within the purview of the skilled artisan having the cited reference before him/her.

From the teachings of the references, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole was prima facie obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references, especially in the absence of evidence to the contrary.

Applicant's arguments filed 5/10/2007 have been fully considered but they are not persuasive.

Applicant argues that Kahane does not detect whether mycoplasma is present in the sample.

It is the examiner's position that Kahane is cited for teaching an acetate kinase assay and establishing acetate kinase's presence in mycoplasma (page 143, left column, last line of 1st paragraph), which is required for the developing of a detecting method by measuring acetate kinase activity. To establish a method of detecting the presence of mycoplasma by measuring acetate/carbamate kinase activity, it is necessary to show not only acetate kinase present in mycoplasma, but also acetate kinase is unique to mycoplasma (which applicant fails to provide support in the specification).

Conclusion

Application/Control Number: 10/825,607

Art Unit: 1657

No claim is allowed.

Certain papers related to this application may be submitted to Art Unit 1657 by facsimile transmission. The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993) (see 37 C.F.R. § 1.6(d)). The official fax telephone number for the Group is 571-273-8300. NOTE: If Applicant does submit a paper by fax, the original signed copy should be retained by applicant or applicant's representative. NO DUPLICATE COPIES SHOULD BE SUBMITTED so as to avoid the processing of duplicate papers in the Office.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to (571) 272-0547.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and

Art Unit: 1657

history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.

For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199.

Any inquiry concerning rejections or objections in this communication or earlier communications from the examiner should be directed to Bin Shen, Ph.D., whose telephone number is (571) 272-9040. The examiner can normally be reached on Monday through Friday, from about 9:00 AM to about 5:30 PM. A phone message left at this number will be responded to as soon as possible (i.e., shortly after the examiner returns to her office).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dr. Jon Weber can be reached at (571) 272-0925.
